Memo

To: Rules Committee Members
From: Michael Erke, Bill Referral Consultant
Date: 2/21/20
Re: Consent Bill Referrals

Since you received your preliminary list of bill referrals, ACR 176 has been added to the list of referrals. AB 2322 and AB 2324 have been removed from the referral list.

REFERRAL OF BILLS TO COMMITTEE

Assembly Concurrent Resolution

No. 168

Introduced by Assembly Member Medina

February 18, 2020

Assembly Concurrent Resolution No. 168—Relative to California Kidney Day.

LEGISLATIVE COUNSEL’S DIGEST

ACR 168, as introduced, Medina. California Kidney Day.

This measure would designate March 12, 2020, as California Kidney Day, and would urge Californians to familiarize themselves with the main causes and consequences of chronic kidney disease (CKD) and the importance of early intervention to conserve health care resources, and to produce a better quality of life for CKD patients.

Fiscal committee: no.

1 WHEREAS, March 12, 2020 has been designated as World
2 Kidney Day; and

3 WHEREAS, Chronic kidney disease (CKD) is a condition that
4 occurs when the kidneys do not work as required to filter waste,
5 toxins, and excess fluid from the body. Many people who have
6 CKD are unaware of their condition; and

7 WHEREAS, CKD can progress to end stage renal disease
8 (ESRD), which is the fifth and final stage of CKD. ESRD requires
9 a continuous course of dialysis therapy or a kidney transplant to
10 maintain life; and

11 WHEREAS, There are approximately 80,000 people with ESRD
12 in the state; and

1 WHEREAS, There is no cure for CKD, but there is abundant
2 medical evidence showing that its recognition and treatment can
3 delay or prevent the onset of ESRD; and

4 WHEREAS, ESRD is caused by diabetes mellitus, high blood
5 pressure, inherited conditions, or other insult to the kidneys; and

6 WHEREAS, Diabetes is the number one cause of CKD in the
7 United States; and

8 WHEREAS, Uncontrolled high blood pressure is the second
9 leading cause of CKD in the United States; and

10 WHEREAS, Severe high blood pressure causes kidney
11 malfunction over a relatively short period of time, but even mild
12 forms of high blood pressure can damage kidneys over several
13 years, with no symptoms evident until there is serious damage;
14 and

15 WHEREAS, CKD causes high blood pressure or worsens
16 existing high blood pressure and accelerates damage to the kidneys;
17 and

18 WHEREAS, Cardiovascular disease is the leading cause of death
19 in patients with CKD; and

20 WHEREAS, Public policy initiatives targeted at early
21 identification, controlling cardiovascular risk factors, and early
22 intervention for those with diabetes mellitus and high blood
23 pressure may reduce the serious long-term effects of CKD on the
24 population, and the significant economic burden on individuals
25 and society; now, therefore, be it

26 *Resolved by the Assembly of the State of California, the Senate*
27 *thereof concurring*, That the Legislature recognizes March 12,
28 2020, as California Kidney Day, and urges Californians to
29 familiarize themselves with the causes and consequences of chronic
30 kidney disease and the importance of intervention to promote
31 sustained health and a better quality of life; and be it further

32 *Resolved*, That the Chief Clerk of the Assembly transmit copies
33 of this resolution to the author for appropriate distribution.

O

Date of Hearing: February 24 2020

ASSEMBLY COMMITTEE ON RULES
Ken Cooley, Chair
ACR 168 (Medina) – As Introduced February 18, 2020

SUBJECT: California Kidney Day.

SUMMARY: Designates March 12, 2020, as California Kidney Day and urges Californians to familiarize themselves with the main causes and consequences of chronic kidney disease (CKD) and the importance of early intervention to conserve health care resources and produce a better quality of life for CKD patients. Specifically, **this resolution** makes the following legislative findings:

- 1) Chronic kidney disease (CKD) is a condition that occurs when the kidneys do not work as required to filter waste, toxins, and excess fluid from the body.
- 2) Many people who have CKD are unaware of their condition; and, CKD can progress to end stage renal disease (ESRD), which is the fifth and final stage of CKD. ESRD requires a continuous course of dialysis therapy or a kidney transplant to maintain life.
- 3) There are approximately 80,000 people with ESRD in the state of California. There is no cure for CKD, but there is abundant medical evidence showing that recognition and treatment can delay or prevent the onset of ESRD.
- 4) ESRD is caused by diabetes mellitus, high blood pressure, inherited conditions, or other insult to the kidneys. Severe high blood pressure causes kidney malfunction over a relatively short period of time, but even mild forms of high blood pressure can damage kidneys over several years, with no symptoms evident until there is serious damage.
- 5) CKD causes high blood pressure or worsens existing high blood pressure and accelerates damage to the kidneys; and, cardiovascular disease is the leading cause of death in patients with CKD.
- 6) Public policy initiatives targeted at early identification, controlling cardiovascular risk factors, and early intervention for those with diabetes mellitus and high blood pressure may reduce the serious long-term effects of CKD on the population.
